Avtomaticheskoye regulirovaniye aviadvigateley; sbornik statey, vyp. 1 (Automatic Control of Aircraft Engines; Collection of Articles, Nr 1) Moscow, Oborongiz, 1959. 182 p. Errata slip inserted. 3,400 copies printed.

Ed. (Title page): A A. Shevyakov; Ed. (Inside book): S.I. Bumshteyn; Ed. of Publishing House: N.A. Gortsuyeva; Tech. Ed.: N.A. Pukhlikova; Managing Ed.: A.S. Zaymovskaya, Engineer.

PURPOSE: This book is intended for workers at scientific research institutions and design bureaus.

COVERAGE: This book contains three articles in which results of the investigation of pressure-ratio regulator characteristics are described. These regulators work on the principle of small drops and proportion reduction and may be used in aircraft engines. A thorough analysis of a laminar flow of air in capillary conduits of automatic regulating systems is given. Problems connected with the calculation of centrifugal atomizers in which viscosity

Card 1/5

Automatic Control (Cont.)

1. Problems of investigation. Testing methods		29
2. Testing results		29
Bogacheva, A.V. Investigation of a Laminar Flow of Air in Capillary Conduits of Pneumatic System Elements		74
The author states that experiments determined a functional dependence of the resistance coefficient and the coefficient of input μ_n in an adiabatically insulated laminar flow of a viscous compressible gas in long plane capillary conduits, on the determining dimensionless parameters: geometric parameters of the conduit, Reynolds number, reduced velocity of the flow (or pressure ratio), and the dimensionless velocity of the moving wall of the conduit.		
Prakhov, A.M. Investigation and Calculation of Centrifugal Injectors		113
The author's method of investigation and calculation of centrifugal injectors is based on the analysis of a number of former methods. He takes into consideration the viscosity of the working fluid on the basis of the equation of the quantity of motion. Consideration of actual processes taking place in the		

Card 4/5

Automatic Control (Cont.)

SOV/3114

injector should be avoided. The problem was restricted to a one stage centrifugal atomizer. However, the calculation of the problem made possible the consideration of more complicated atomizers.

PHASE I BOOK EXPLOITATION

SOV/2702

Akademiya nauk SSSR. Institut avtomatiki i telemekhaniki. Seminar po pnevmogidravlicheskoy avtomatike. Ist. Moscow, 1957. Sistemy, ustroystva i elementy pnevmogidravlicheskoy avtomatiki. (Pneumatic and Hydraulic Circuits, Devices, and Elements in Automation). Collection of papers. Moscow, Izd-vo AN SSSR, 1959. 233 p. Errata slip inserted. 2,700 copies printed.

Resp. Ed.: M. A. Ayzman, Doctor of Technical Sciences, Professor; Ed. of Publishing House: A. A. Tal; Tech. Ed.: T. P. Polyskova.

PURPOSE: This collection of papers is intended for scientific research workers and engineers in the field of design and construction of pneumatic and hydraulic equipment and accessories for automation.

COVERAGE: This collection contains papers read at the Seminar on Pneumatic and Hydraulic Systems for Automation, May 28, 1957. The collection is divided into the following three groups: 1) newly developed pneumatic and hydraulic circuits 2) pneumatic and hydraulic devices, including regulating units, transmitters and hydraulic actuators, actuating mechanisms, special-purpose devices, and auxiliary equipment and 3) elements of pneumatic and hydraulic devices for automation, such as controlled and permanent nozzles and diaphragms. No personalities are mentioned. References follow several of the papers.

Androva, Ye. A. Moscow. Calculating the Static Characteristics of Back-pressure Type Elements
This paper deals with a theoretical analysis of back-pressure type elements. Flow of fluid, pressure distribution on plates, and general characteristics are discussed. 172

Shustkiy, K. P. Moscow. Results of Experimental and Theoretical Investigation of Back-pressure Type Control Devices 181

Bogachyov, A. V. Moscow. High-velocity Laminar Air Flow in Flat Capillary Channels
This paper discusses air flow in flat capillary channels at varying pressures. The flow rate is experimentally investigated and results shown graphically. Charts to be used for determining resistance coefficients and flow rates are presented. 194

Kichin, I. N. Moscow. Nozzle Clogging and Methods of Combating It
The tendency of certain working fluids toward nozzle and slit clogging is examined. Minimum dimensions of nozzle and slit sections at which the fluid flow rate remains constant are determined. Some practical methods of combating clogging are presented. 205

Diaphragms
Afanas'yev, V. V. Moscow. On Variation of Effective Areas of Fabric Diaphragms
Changes in the magnitude of effective areas of corrugated diaphragms during the stroke are analyzed and their significance in the design of a KFT-MA pneumatic regulator discussed. 216

Koch, Yu. I. and G. P. Stepanov. Moscow. Investigation of Characteristics of Diaphragms Used in Sensitive Elements of Regulators
Characteristics of rubberized-fabric diaphragms made from various materials are discussed. The influence of hysteresis in relation to the stroke and the influence of the temperature of the surrounding medium are investigated. Test results of beryllium-bronze diaphragms are presented. 224

04. Ratio Controller for Gas Pressures in Jet Engines

"Study of the Characteristics of Gas-Pressure Ratio Controllers Designed for Jet Engines," by L. A. Zaisanov, Yu. L. Mach, and G. P. Stapanov; Avtomaticheskoye Regulyrovaniye Avtomobilnykh (Automatic Control of Aircraft Engines), Moscow, 1959, pp 5-13

The study of the precision of the transmitting elements of regulators for pressure ratio involves two problems. The first concerns the characteristics of various elements of the transducer (diaphragm, throttle, etc.) and of the interthrottle space, the determination of possible diversions of these characteristics, the study of friction in the moving parts of the transducer, and the determination of possible external influences. The second problem involves the determination of the influence of the above factors on the accuracy of measurement of the pressure ratios. The first part of this work presents an analysis of the influence of the errors of various elements on the resultant transducer error. The second part presents an analysis of supplementary errors which occur during the absence of a supercritical flow at the outlet from the interthrottle space of the transducer. An artificial reduction of gas pressure at this outlet through the use of ejectors is suggested as a means of broadening the area of proportional control of the pressures. This affords an adjustment of those errors which are connected with an infraction of the principle of proportional pressure control. Results are given of an investigation of jet and vortex-type ejectors for gas pressure ratio controllers.

LONG

Uncompensated errors resulting from friction and hysteresis effects in the diaphragm material are particularly unfavorable. Special experiments for the determination of the diaphragm error are described. The data given here refer only to tests on rubber-fabric diaphragms.

Potassium iodide (200 mg./kg.) was given per stomach tube to rabbits and the blood
iodine level was determined 12 hr. later. The animals were either normal, thyro-
idectomized or made hyperthyroid by TSH treatment. The highest blood level was
found in the normal, the lowest value in the hyperthyroid animals. The low level
after thyroidectomy was caused by a markedly increased urinary excretion of io-
dine.

Prolonged administration of calcium salts brings about a decrease of the iodine level in the blood, an increased urinary excretion of iodine, an increase in weight of the thyroid and a decrease of iodine in the thyroid. Prolonged administration of calcium salts with food brought about a distinct decrease of iodine in the tissues.

EXCERPTA MEDICA Sec 5 Vol. 10/6 Pathology June 57

1828. SZAFRAN L. and MACH Z. Zakt. Patol. Ogólnej i Doświadczalnej A. M., Kraków. *Wpływ wapnia na stan czynnościowy i obraz histologiczny tarczycy. Influence of calcium on the functional state and the histological picture of the thyroid POL. TYG. LEK. 1956, 11/48 (2031-2035) Graphs 1 Tables 7

Referring to the iodine-calcium antagonism, the iodine content in the blood, and in the thyroid and the morphological picture of the thyroid in the progeny of rats, which had been kept on a Ca-abundant diet, were examined. The iodine level in the blood decreased on the average to 4.88 $\mu\text{g.}\%$ (in the control animals to 6.25 $\mu\text{g.}\%$). The weight of the thyroid was doubled. The iodine content in the thyroid decreased and amounted on the average to 1.07 $\mu\text{g.}$ (in the control animals on an average to 2.83 $\mu\text{g.}$). Taking into consideration the hyperplasia of the gland and calculating the iodine content per 1 g. of weight, it was found, that the iodine content decreased

EXCERPTA MEDICA Sec.2 Vol.10/8 Phy.Biochem. Aug 57

3297. MACH Z. and KOSTKA E. Zakł. Patol. Ogóln. i Dośw. A.M., Kraków.

Title : Effect of Cortisone on Iodine Metabolism in the Light of Tests with Radioactive Iodine

Orig Pub : Patol. Polska, 1957, 8, No 4, 317-321

Abstract : Following administration to rats of 5 mg cortisone or 0.25 - 5 units of thyrotropic hormone for 7 days, the serum concentration of J¹³¹ was not changed. When thyrotropic hormone and cortisone were administered simultaneously, the serum concentration of J¹³¹ decreased. The amount of protein-bound J¹³¹ increased after introduction of thyrotropic hormone and decreased after cortisone and cortisone plus thyrotropic hormone. Urinary excretion of J¹³¹ was least in rats which received thyrotropic hormone.

Title : The Levels of Iodine Metabolism in Hypothermia.

Orig Pub : Polski tygod. lekar., 1957, 12, No 41, 1571-1575

Abstract : Rabbits were intravenously injected with KI (100 g/kg). Simultaneously, some of the animals received intravenous injections of 0.1 or 0.05 g/kg of sodium salts of luminal for a period of 10 days. Then, for about 3½ hours all animals (with the exception of controls) were subjected to chilling by water containing ice. As such hypothermia was carried out, the blood's and the thyroid gland's (TG) I content became lowered. TG absorbed 3 times less of I than normally. In hypothermia, "narcosis of the diencephalon" protected TG from losing I and even increased its content, without, however, influencing the ability of TG to absorb I.

Title : The Effect of Calcium on the Function and Histology of the Thyroid Gland. II.

Orig. Pub. : Polski tygod. lekar., 1957, 12, No. 42, 1611--1614

Abstract : The investigation was conducted on rats, of which the two preceding generations had received increased amounts of calcium in their diets, as did the animals used in the present experiment. The rats were injected with 200 μ /kg of iodine, and 6 hours later the iodine content of various organs was determined. The concentration of iodine by the thyroid gland was 6 times lower than normal. The iodine content of liver, kidneys and muscles was normal. Urinary excretion of iodine was increased. Structural changes in the thyroid gland were not detected.

In guinea-pigs on a scorbutigenic diet the metabolism of I^{131} was found to be only slightly changed. On the 29th day of scurvy the urinary excretion of I^{131} was increased and its amount in the thyroid decreased (as compared with controls receiving ascorbic acid). These changes took place between the 21st and the 29th day of ascorbic acid deprivation. This is in accordance with the findings of other investigators. (11, 5)

Title : Effect of Cortisone on Iodine Metabolism in the Light of Tests with Radioactive Iodine

Orig Pub : Patol. Polska, 1957, 8, No 4, 317-321

Abstract : Following administration to rats of 5 mg cortisone or 0.25 - 5 units of thyrotropic hormone for 7 days, the serum concentration of J131 was not changed. When thyrotropic hormone and cortisone were administered simultaneously, the serum concentration of J131 decreased. The amount of protein-bound J131 increased after introduction of thyrotropic hormone and decreased after cortisone and cortisone plus thyrotropic hormone. Urinary excretion of J131 was least in rats which received thyrotropic hormone.

Title : The Levels of Iodine Metabolism in Hypothermia.

Orig Pub : Polski tygod. lekar., 1957, 12, No 41, 1571-1575

Abstract : Rabbits were intravenously injected with KI (100 μ /kg). Simultaneously, some of the animals received intravenous injections of 0.1 or 0.05 μ /kg of sodium salts of luminal for a period of 10 days. Then, for about 3 $\frac{1}{2}$ hours all animals (with the exception of controls) were subjected to chilling by water containing ice. As such hypothermia was carried out, the blood's and the thyroid gland's (TG) I content became lowered. TG absorbed 3 times less of I than normally. In hypothermia, "narcosis of the diencephalon" protected TG from losing I and even increased its content, without, however, influencing the ability of TG to absorb I.

Antihistamine substances. XXXV. Kinetics of the hydrolysis of antihistamines of the benzhydryl type. Eduard Knobloch, František Macha, Otto Exner, and Miroslav Protiva (Výzkumný ústav farm. biochem., Prague, Czech.). *Chem. Listy* 48, 228-31 (1954); cf. *C.A.* 49, 1604d. Kinetic measurements of the hydrolysis of antihistamines of the benzhydryl type indicate the acid-catalyzed cryptobimolecular reaction. The generally accepted scheme of this reaction was checked by the primary salt effect. The effect of substituents in various positions of the diphenylmethane radical on the hydrolysis rate corresponds to the theoretical considerations. The rate of hydrolysis and antihistamine activity parallel each other though not without exceptions. XXXVI. Preparation of *p*-substituted analogs of Antistina. Jiří O. Jilek, Josef Pomýkáček, and Miroslav Protiva (Výzkumný ústav farm. biochem., Prague, Czech.). *Ibid.* 232-4. — *p*-MeC₆H₄CH₂NPh, m. 42-4°, b₁₀ 125-6° (50 g.) in 85 ml. MeOH hydrogenated over 10 g.
